

Steam Humidifier

Protect Investments and Improve Comfort

Optimum Relative Humidity Ranges for Health

“Take action and join me in the fight against respiratory infections! Relative humidity of 40-60% in buildings will reduce respiratory infections and save lives.”

Dr. Stephanie Taylor

Infection Control Consultant at Harvard Medical School
ASHRAE Distinguished Lecturer & member of the ASHRAE Epidemic Task Group

Why Humidification:

Improving health and wellbeing with humidity control 40-60% RH (relative humidity) is the ideal condition for our overall wellness, the efficient functioning of our respiratory immune system and the prevention of spreading airborne microbes and pollutants throughout buildings.

Protects valuable investments

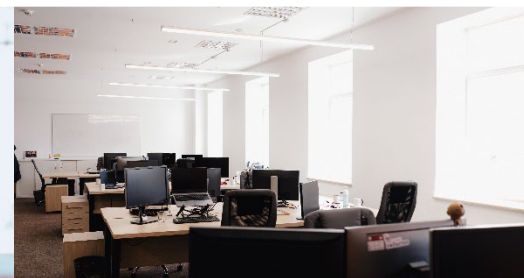

Wood floors, plaster, wallpaper, paint, furniture, musical instruments, plants, and even electronics will perform better and last longer in a properly humidified room.

Dry air and skin

Low humidity dries the outer layer of our skin leading to itchiness, cracking, and dermatological problems

Productivity

Maintaining the optimum humidity in a workplace improves employee health

Steam Humidifier

Space Steam Humidifier
Part# RH2-SPACE

Ducted Steam Humidifier
Part# RH2-DUCT

Proper humidification creates an environment where IAQ products can perform at optimum efficiency

Specifications

Benefits

Auto-adaptive control

Single cylinder – for all water conditions

Quiet, convenient, automatic operation

- Quiet drain valve standard
- Prevents solenoid hammering noise

1:1 – 100% positive output

- Optimizes water usage
- Much less waste than bypass units

Most hygienic solutions – boiling water

- More installation flexibility
 - Condensate drain returns to cartridge
 - Allows for the option to go around obstructions

- Helps prevent colds, flu, sore throats, dry skin, frizzy hair, and other respiratory issues.
- Low maintenance – no messy clean up or slimy, stale water in a reservoir.
- No water reservoir to allow scale build-up.
- A cost-effective, long-term solution that can make a major difference in your health, comfort, and ability to sleep.
- More comfort in colder months.
